REASONS FOR ALLOWANCE

1. Claims 1-23 are allowed. The following is a statement of the examiner's reasons for allowance. The present invention relates to the configuration of an optical modulator used in the field of optical communication as a phase modulator, intensity modulator or polarization modulator. In particular, it relates to the configuration of a resonance type optical modulator using a symmetric or asymmetric electrode having high modulation efficiency even with a low input voltage. Regarding independent claim 1, the present invention reads on a resonance type optical modulator. The present invention is distinguished over the prior art by its unique configuration comprising an optical path having electro-optical effect characteristics, a modulation electrode, a common electrode formed opposite to the modulation electrode, a feeding line electromagnetically connected to the modulation electrode, and stubs connected to the feeding line, wherein the feeding line, stubs and common electrode being provided on one side of a region that is divided by the modulation electrode. Independent claims 21-23 read on similar resonance type optical modulators comprising asymmetric electrode configurations. The claimed invention is therefore considered to be in condition for allowance as being novel and non-obvious over prior art.

2. The prior art taken either singly or in combination fails to anticipate or fairly suggest the limitations of the independent claims, in such a manner that a rejection under 35 USC 102 or 103 would be improper. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
